

LAMINATE LOCKERS FOR INDUSTRY

Ref. 113.X0 from the company SUFFIXE (70190 Rioz, phone: 03 84 91 24 70).

Quantity :

In function of the architect drawings

Technical data:

Standard dimensions of the columns: height : 183,5 cm + feet 15 cm – depth 50 cm – width 30.

The lockers are entirely build in solid grade laminate (frame and doors) of 10 mm thickness, adjusted to the humid atmosphere.

The assembly go very fast: it just need to insert and then screw the laminate panel (floor, shelves and upper parts). It is possible to gather it in the factory (as an option).

The assembly is done by block, from 1 to 4 columns which allow to build complete furniture.

The hinges are in stainless steel and are set up at the right side of the standard column.

The shelves are put with a 2% slope which evacuate the wash water from the front.

The fastenings are also in stainless steel and are invisible in the frontage. The lockers are put down on rectangular anodized stringers (50x30 mm) which are supported on nylon adjustable feet (attended by fiberglass) or set on a masonry base.

You can add in option numbers on each doors.

In general:

- Each box is set up with a hanger bar and a shelf.

- Choice of the locking system:

1 user with key locker (2 keys per lock), door padlock or code lock.

Several user with code lock or change lock.
